Hi Kathleen,

Just wondering if you have any agalinis blooming at Watson's? We have a visiting botanist from Florida, and he has studied that plant in the past, so he's interested in it.

Don't know if he will have time to look for any this trip bc he is working on something else, but thought I would ask just in case he has time.

Thanks

Sue

We do have some. I'm not sure which species. It is either A. fasciculata or A. oligophylla.

You can give him my number and I can show it to him if he gets over here. 936-933-3089 or he can discover it on his own. That may be more fun. Depends on his time available.

Kathleen, can you remind of where Watson's preserve is located, it is years since I have been there. I can stop and take a look.

Thanks much,
